DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
2. Claims 1-5, 14-16, 24, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pandya et al. (7,260,635) in view of Matsubara et al. (2004,0008688).
3. Pandya teaches a method and system (abstract) of enforcing bandwidth limitations via QoS techniques (col. 1, line 1 – col. 5, line 15) for local and wireless networks (col. 5, line 15 – col. 8, line 10). In particular, a control system permits or prevents transmission of requested feed data based on client eligibility (col. 8, line 10 – col. 33, line 5).
4. Pandya does not expressly disclose reimbursement for previously lost data. Matsubara teaches a method and system (abstract) of billing in QoS systems (Paras. 1-48) that specifies bill handling and reimbursement of such systems (Paras. 49 – 151). At the time the invention was made, one of ordinary skill in the art would have added the features in order to ensure billing fairness to a user (Para. 15).
5. Claims 6-9 and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pandya and Matsubara as applied to claim 1 above, and further in view of Cain et al. (7,085,290).
6. Pandya and Matsubara do not expressly disclose the timestamp-based eligibility system. Cain teaches a method and system (abstract) of providing QoS methods to mobile networks (col.

1, line 1 – col. 5, line 15) that includes these limitations (col. 5, line 15 – col. 11, line 60). At the time the invention was made, one of ordinary skill in the art would have added Cain in order to further QoS functionality (col. 2, lines 50-60).

7. Claims 10-13, 21-23, 25, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pandya, Matsubara and Cain as applied to claim 8, 17, 24 above, and further in view of Suni (7,068,660).

8. Pandya, Matsubara and Cain do not expressly disclose the particular bandwidth-limitation formulae listed in the claims. Suni teaches a method and system (abstract) of a QoS-type system (col. 1, line 1 – col. 9, line 60) that includes the various algorithmic methods of bandwidth limiting decisions (col. 9, line 60 – col. 28, line 40). At the time the invention was made, one of ordinary skill in the art would have added Suni in order to increase the efficiency and certainty of the QoS systems (col. 1, lines 35-60).

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They regard further teachings on QoS for mobile systems, and on background teachings of media streaming, bandwidth monitoring, and billing systems.
